The Edge Band Saw Spooling Machine (Patent Pending) is designed to simply roll blades into pretzel bundles. The main benefits of rolling blades into pretzel bundles is to reduce and standardize the packaging size. Also the reduction of labor cost and shipping cost. The blades are loaded into the machine inside one another or one at a time. Then the operator will press the forward button. The machine will roll the blade(s) a predetermined amount and hold the blade(s) while the operator ties the bundle up. Then the operator will press the reverse button. This will release the tension on the bundle for ease of removal from the machine and then press the home button to return to the loading position.

Specifications:

- 1/6 hp spooling Gearmotor
- Automatic Cycle-spools blades, stops to allow operator to tie blade bundle, and then relaxes for removal of blade bundle.
- MicroPLC controlled
- Electric: 120 or 240 VAC, single phase
